1 [Systems: AMPS: a flexible, scalable proxy testbed for implementing streaming services](#)

Xiaolan Zhang, Michael K. Bradshaw, Yang Guo, Bing Wang, Jim Kurose, Prashant Shenoy, Don Towsley

 June 2004 **Proceedings of the 14th international workshop on Network and operating systems support for digital audio and video**

Publisher: ACM Press

 Full text available: [pdf\(207.23 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We present the design, implementation, and performance evaluation of AMPS --- a flexible, scalable proxy testbed that supports a wide and extensible set of next-generation proxy streaming services. AMPS employs a modular architecture and is built on top of a commodity Linux system. We study the performance of AMPS proxy using a server-proxy-client configuration in a switched-Gigabit LAN environment. We identify the CPU to be the system bottleneck. Through profiling study, we further identify the ...

2 [Experimental testbeds and data: The changing usage of a mature campus-wide wireless network](#)

Tristan Henderson, David Kotz, Ilya Abyzov

 September 2004 **Proceedings of the 10th annual international conference on Mobile computing and networking**

Publisher: ACM Press

 Full text available: [pdf\(625.48 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Wireless Local Area Networks (WLANs) are now commonplace on many academic and corporate campuses. As "Wi-Fi" technology becomes ubiquitous, it is increasingly important to understand trends in the usage of these networks. This paper analyzes an extensive network trace from a mature 802.11 WLAN, including more than 550 access points and 7000 users over seventeen weeks. We employ several measurement techniques, including syslogs, telephone records, SNMP polling and tcpdump packet sniffing. This is ...
